

Who:

- Rami Mouro
- Kyle Stewart
- Yair Bennaim
- Josiah Graham
- Rohan Suri
- Ian Bell

• Title: LoChat

User Acceptance Tests

- User Sign in and create users feature:
 - This will be tested by creating a few accounts and then verifying in the database that these users were created then we sign in using those accounts.
 - Testing for case sensitivity, not breaking the database, etc
 - Invalid account information will be attempted to verify correct operations.
 - Log out capability
- Chat room
 - This will be tested by using the accounts created above to start messaging in the chatroom and be able to communicate with each other.
 - Testing message history setting to see what fits best for our chat room
 - Test for latency problems between clients.
- Proper front end navigation
 - Navigate to/from the different LoChat pages
 - Both functional and intuitive for the new visiting user
 - Assure that users can only access pages while logged in and pages belonging to their user group.

Table below will be used for tracking results of our testing. Table be modified even more.

#	Requirement	Critical (YES/NO)	Test Result	Comments
1	Account Registration	Yes		
2	Chat room	Yes		
3	Navigate Front End	Yes		
4	Account access	Yes
